EXPERIENCE

ICT Help desk

New Mexico State University

2023-Present

- Provided comprehensive technical support to students, faculty, and staff by diagnosing and resolving hardware, software, and network issues via in-person, phone, and remote channels, ensuring minimal downtime.
- Configured and maintained IT equipment (computers, printers, and peripherals) while implementing robust security measures to optimize performance and safeguard sensitive data.
- Managed user accounts by executing password resets, access permissions, and account setups with strict adherence to confidentiality and data integrity standards.
- Streamlined service ticket workflows by documenting incidents thoroughly, achieving timely resolutions, and effectively escalating complex issues to specialized support teams.
- Educated users on cybersecurity best practices, enhancing awareness across campus and reducing vulnerability risks through proactive training sessions.
- Collaborated with cross-functional teams to continuously improve support processes, contributing to enhanced operational efficiency and overall customer satisfaction.

Computer Vision Fellow

AI4ALL

2024-2025

- Developing an AI project focusing on Computer Vision with support from industry leaders, peers, mentors, and instructors.
- Implementing cutting-edge Computer Vision algorithms to enhance project outcomes.
- Collaborating with team members to optimize AI models for improved accuracy and efficiency.

PROJECTS

Personal Information Security Lab

- Built a fully isolated penetration testing lab using Kali Linux, Metasploit, and Burp Suite to simulate real-world attack scenarios.
- Performed vulnerability assessments on intentionally vulnerable machines (e.g., Metasploitable, DVWA, OWASP Juice Shop) using Nmap, Nessus, and Nikto.
- Executed penetration testing techniques, including brute-force attacks, SQL injections, cross-site scripting (XSS), and privilege escalation, to understand security weaknesses.
- Conducted network traffic analysis with Wireshark and tcpdump, identifying potential threats such as MITM attacks, DNS spoofing, and ARP poisoning.
- Set up and configure a SIEM solution (e.g., Splunk or Security Onion) to monitor and analyze logs for intrusion detection.
- Deployed a firewall and IDS/IPS (e.g., pfSense, Snort, or Suricata) to detect and prevent unauthorized access.
- Created incident response reports documenting findings, mitigation strategies, and security recommendations.
- Developed automation scripts using Python to scan open ports, detect vulnerabilities, and analyze logs for suspicious activities.
- Implemented Active Directory security measures, including Group Policy hardening, user access controls, and PowerShell auditing to simulate enterprise security.

AI Attendance Application

- Developed an AI Attendance Application as part of a collaborative team of three.
- The application leverages OpenCV for real-time face detection, enabling automated attendance tracking through video analysis.
- Using Pandas for data management and Matplotlib for visualization, the system efficiently captures and stores attendance records, streamlining the process for users.
- The project enhances accuracy in attendance tracking while reducing administrative workload, demonstrating the practical application of AI in educational environments.

EDUCATION

BS in Cybersecurity

New Mexico State University • Las Cruces, NM. • 2022 – Present

Relevant courses (Linux Server, Linux workstation, Windows workstation, IT support, Linux Administration, OOP, Data Structures, Machine Programming, Computer Networks)

CERTIFICATIONS

IBM - Python for Data Science, AI & Development

CompTIA – Security + | Expected in April 2025

Tryhackme – Junior Penetration Tester

SKILLS

Operating Systems (Linux and Windows)

Technologies (Azure, Active Directory, Office 365, VPN's, IDS/IPS, Firewall management)

Frameworks (Pytorch, Keras, OpenCV, Pandas)

Cybersecurity Tools (Kali Linux, Wireshark, Metasploit, Splunk, Nessus, Burp Suite)

Programming Languages (Java, Python, C, C++, HTML, CSS, JS, AVR Assembly)
