

TRENTEN BISHOP

SOFTWARE ENGINEER

CONTACT

(575)936-1905
ttbishop@nmsu.edu

SKILLS

Technical skills:

Programming (Java, Python, C++,
C, Machine code, JavaScript, CSS,
HTML)
Object oriented programming
Data structures
Pytorch
Keras
OpenCV
Pandas
Mathematics
Linux
Windows 11 and 10

EDUCATION

New Mexico State University, Las Cruces,
NM.
2022 – Present
BS in Computer Science

Cerification:
IBM - Python for Data Science, AI &
Development.

PROJECTS

Project: Crime Rate Analysis

Analyzed crime rates between years using Pandas and Matplotlib to identify trends, highs, and lows in criminal activity. Developed visualizations to effectively communicate findings and support data-driven decision-making.

Project: AI Attendance Application

Developed an AI Attendance Application as part of a collaborative team of three. The application leverages OpenCV for real-time face detection, enabling automated attendance tracking through video analysis. Using Pandas for data management and Matplotlib for visualization, the system efficiently captures and stores attendance records, streamlining the process for users. The project enhances accuracy in attendance tracking while reducing administrative workload, demonstrating the practical application of AI in educational environments.

EXPERIENCE

ICT Help desk – New Mexico State University

2023 – Present

- Provide technical support to students, faculty, and staff by troubleshooting hardware, software, and network issues through in-person, phone, and online communication.
- Assist with setting up and configuring computers, printers, and other IT equipment, ensuring optimal performance and security.
- Manage user accounts, including password resets and access permissions, while maintaining strict confidentiality and data integrity.
- Document and resolve service tickets efficiently, escalating complex issues to higher-level support when necessary.
- Educate users on best practices for cybersecurity and effective use of university IT resources.
- Collaborate with team members to improve service processes and contribute to a positive support experience.

Computer Vision Fellow – AI4ALL

2024- Present

- Developing an AI project focusing on Computer Vision with support from industry leaders, peers, mentors, and instructors.
- Implementing cutting-edge Computer Vision algorithms to enhance project outcomes.
- Collaborating with team members to optimize AI models for improved accuracy and efficiency.
